Stellar Ventures is the corporate incubator/ venture capital arm of Stellar Solutions Inc., a leading supplier of technical engineering expertise to the satellite and space industry. Stellar Solutions has a elite cadre of professionals skilled in the field of program management and space operations. Stellar Solutions plays a vital and active role in virtually every major space-based project, including :

--Telecommunications satellites

--Defense Related Intelligence Projects

--NASA'S planetary missions

Our key objectives are:

- ▶ To generate attractive returns for our parent firm and our co-investment partners by participating in the development of promising businesses.
- ▶ To provide Stellar Solutions professionals with opportunities outside the core aerospace arena in promising commercial arenas such as telecommunications and the internet.
- ▶ To bring together promising opportunities and great people that, in our view, will provide the very tangible benefit of providing rewarding, fun, and meaningful work with high impact for all involved.

As a newly formed venture arm, we are currently operating with what one might term as "large net and a fine filter."

The "wide net" means we are soliciting and examining opportunities in a wide range of different arenas.

The "fine filter" signals our intent to carefully examine all opportunities before committing our resources.

Our strongest interests lie in growing, high technology fields in which the principals of Stellar Ventures have some prior experience. The following list provides a partial view of such arenas:

- ◆ **Communications Infrastructure:** Stellar Solutions, our parent company, and its employees, have played a significant role in helping to build the space based portion of the modern communications backbone. We see great promise in expanding our business into new space based communications schemes (internet via satellite, etc.) and non-space based communications schemes (optical networks, etc.).
- ◆ **New Sensing Technologies:** We believe there is a strong need for low cost sensing technologies with high specificity to newly emerging problems. Stellar Solutions has extensive experience with space based systems performing imaging and sensing functions and would like to expand these capabilities into non-aerospace applications. We seek to participate in meaningful efforts to detect potentially harmful substances for purposes of anti-terrorism, food safety, and others.

Here is a partial listing of the criteria we employ to screen opportunities:

MARKET:

Our interest lie in markets that are either large, or promise to be large and are undergoing rapid growth.

VALUE PROPOSITION:

We must see a clear means of creating a sustainable and unique benefit to the customer.

LOCATION:

We have a strong interest in businesses in the SF Bay Area, Denver, Colorado, the Washington, DC area or businesses that can be relocated.

If your company meets these criteria and you are looking for venture capital, contact us at info@stellarventures.net

Submit proposals, emails, questions to David Wensley:

Mail: Stellar Ventures
250 Cambridge Avenue,
Suite 204
Palo Alto, California 94306

Attn: Kevin Ford

Email: kford@stellarventures.net

Fax: (650) 473-9867

Web site: www.stellarventures.net

When submitting a proposal, please observe the following guidelines:

- ▶ Description of the business opportunity, the industry, and the technology.
- ▶ Ensure we will understand the problem (customer pain) that your solution addresses.
- ▶ Short history of the work done to-date, including the team that is currently working on the opportunity.
- ▶ Please be concise with initial submissions (there will always be opportunities for submitting greater detail at a later date if the proposal appears of interest to Stellar Ventures).

Celeste Ford:

Celeste Volz Ford is the founder and CEO of Stellar Solutions, Inc., an aerospace engineering consulting firm with personnel located in California, Colorado and the Washington D.C. area. Under her guidance, Stellar Solutions has grown more than tenfold since its inception in 1995 by participating in projects of national and international significance. In 1998, Ms. Ford established the Stellar Solutions Foundation to support community-based organizations and charities.

Ms. Ford earned a B.S. degree in Aerospace Engineering from the University of Notre Dame and an M.S. degree in Aerospace Engineering from Stanford University. Over the course of her career, Ms. Ford has assumed positions of increasing responsibility, each of which prepared her for the leadership position she holds today.

Stellar Ventures offers the following:

To Entrepreneurs:

[To Business Owners With Businesses For Sale:](#)

To the Entrepreneur:

The principals of Stellar Ventures share a common experience with you, the entrepreneur. We have walked the path of creating new businesses from scratch.

With this common background, we have several valuable things to offer you. If there is a good fit with focus and criteria, we are in a position to provide you resources, assistance, or financing.

If you are confident you are properly positioned to approach traditional venture capital firms, then we encourage you to do this as we may have little to offer a company at this stage. But, if you are in an early stage venture, we feel strongly that we can leverage our experience and our contacts to better position you to meet your financing objectives.

Stellar Ventures offers the following:

[To Entrepreneurs:](#)

To Business Owners With Businesses For Sale:

To Business Owners With Businesses For Sale::

Stellar Ventures is actively seeking businesses for acquisition. Our acquisition criteria favors stable technology hardware/manufacturing businesses in Northern California (or relocatable), with a solid revenue base.

We are only interested in businesses that are profitable (on a recast basis).

Our ideal target is \$10 to \$25 million in revenues.

We have a strong interest in telecommunications hardware companies.

[Stellar Venture\\$](#)[Focus](#)[Criteria](#)[What We Offer](#)[Projects](#)[People](#)[Contact Us](#)

Stellar Projects:

- ▶ [Elf Sensing](#)
- ▶ [Chem Alert](#)

ELF Sensing

Stellar Solutions staff have reviewed over a hundred scientific papers describing ELF/earthquake correlations, and we feel that ELF monitoring is an under-exploited, promising technique for short-term earthquake risk assessments. We believe the solutions might reside in continuously monitoring ELF emissions, first from the ground, then from space.

We feel so strongly about this that we started by funding, designing, and building several low-cost ELF monitoring ground stations, using a proprietary 3-axis antenna capable of detecting pico-Tesla per root hertz signals. The system uses a commercial PC and a 1-800-phone links to keep costs down. We have also funded and organized a multi-high school science project to build an 11-station network of sensors to be installed along the San Andréa's and Hayward Faults in the Bay Area. We have one system operating 24 hrs per day for over a year, and the remaining systems, should be on line by the late fall of 2000. A large-scale, ground-based network, built to monitor the major fault zones in northern California was just funded by the State of California (CSTA Grant), and will allow us to build and deploy 40 additional units, with a monitor deployed every 20 miles, near the faults. This high school science project is demonstrating that civilians (schools) can be considered a reliable, low-cost, year valuable part of a large, data gathering research project. We used China as a model, where they have more than 10,000 civilians gathering earthquake data today.

We now feel that it is time to consider a space-based ELF monitoring system to augment the limited ground-based system being built. The promising results of the early Cosmos and Aureol ELF monitoring, and the availability of low cost satellites and "piggyback" launch opportunities, make it practical to fly an ELF sensor on a satellite to perform world-wide monitoring of these earthquake signals.

Stellar Projects:

- ▶ [Elf Sensing](#)
- ▶ [SPR Biosensor](#)

SPR BioSensor

Stellar Solutions Inc. aims to develop and commercialize a novel line of portable bio-technology instruments based on the Surface Plasmon Resonance (SPR) principle. These affordable handheld devices would enable users to rapidly and accurately detect trace levels of specific chemical and biological species. By creating a whole new class of portable biotech sensing devices, SPR has enormous investment potential.
